# GUIDED TOUR XX MYRIAD BOTANICAL GARDENS

# August, 11 2023 Garden Plants for Birds

### **Common Name: Yaupon Holly**

#### Botanical Name: Ilex vomitoria 'Nana'

This evergreen shrub is the dwarf cultivar of the much larger yaupon holly; it will stay under five fee in all its dimensions. It's common to find this shrub trimmed into hedges or shaped into topiary spheres in the landscape. The small white flowers in the spring are somewhat striking. The red drupe berries that are common with Yaupon Holly are not as noticeable with this dwarf cultivar. The berries will stay on during the winter, attracting birds and other wildlife as a food source.

## Common Name: Western Soapberry

#### Botanical Name: Sapindus saponaria subsp. drummondii

This Oklahoma native tree can grow very large, up to 50 feet tall. The mature bark heaves and peels very distinctively. Soapberry has a peculiar yellow-orange translucent berry in the late summer that persists into the winter. Birds will eat the fruit. The flesh of the berries makes a soap-like froth when mixed with water. The autumn foliage is often an attractive yellow.

#### **Common Name: Viburnum**

#### Botanical Name: Viburnum nudum 'Bulk' Brandywine™

This species of viburnum is native to much North America. White flattopped clusters of flowers appear in the late spring and early summer. Later in the year, clusters of blue berries form, feeding a number of bird species. The Brandywine<sup>™</sup> cultivar is relatively compact and stays under six feet tall, and has an abundance of berries in pink and blue colors. The autumn foliage is often red to dark-burgundy.

GUIDED TOUR 🗱

#### Common Name: Four-O' Clocks

#### Botanical Name: Mirabilis jalapa

variegated colors. Its long tubular flowers are attractive to hummingbirds. Their flowers open in the mid to late afternoon, hence the common name "Four-o'clocks." This self-sow and come back each year, if not deadheaded. The seeds have an interesting shape; they look like a king's crown. Plants grow thick, carrot-like roots that can be dug up and overwintered indoors.

## **Common Name: Elderberry**

#### Botanical Name: Sambucus nigra

The elderberry is a large multi-stemmed shrub noted for its dynamic display as well as edible berries. In early summer, lacy flat-topped clusters of white flowers cover the tree. The flowers give way to glossy purpleblack berries that last into fall. The fruit can be left for birds and other wildlife or used to make juice, wine, jams and jellies. Elderberries are full of vitamins and antioxidants and have been shown to be effective in treating the flu. If not pruned, elderberries can grow up to 20 feet tall.

## Common Name: Strawberry Bush

#### Botanical Name: *Euonymus americanus*

This Oklahoma native shrub is rather unassuming to the eye until autumn rolls around. Its bountiful crop of fruit starts rough textured and light pink. Over the course of a month they deepen to a nearly ruby color then burst open to reveal bright orange seeds. Birds will eat these seeds. The autumn foliage can often turn a mix of light pink and creamy white. In the winter, all the stems are a deep green, which provides some color and interest.

#### Common Name: Cup Plant

#### Botanical Name: Sylphium perfoliatum

This tall garden perennial is native to Oklahoma and can grow five to eight feet. The yellow flowers grow on the top the sturdy, square stems in July. The leaves have a rough sandy texture and have a curious formation to them. The leaves are arranged opposite along the stem and each pair is fused together in a way that forms a small receptacle for rain water. Small birds and insects may drink from these little cup, hence its common name Cup Plant. The seed are matured by early autumn and can be eaten by birds.

## MYRIAD BOTANICAL GARDENS

#### **Common Name: Juniper**

Botanical Name: Juniperus scopulorum 'Monam' Blue Creeper™ Junipers can form the bones of a garden design and provide year-round structure for the landscape. The Blue Creeper™ variety, has a deep grayblue color. It produced an abundance of juniper berries in an attractive chalky gray. These will stay on the shrub a very long time and are a food source for local birds. Many junipers are widely adaptable garden plants, able to withstand heat, drought and tough clay soils.

## Common Name: Chickasaw Plum Botanical Name: Prunus angustifolia

This Oklahoma native tree produces an abundance of very tasty fruit. The red-orange plums are about an inch across and ripen in the late summer. Birds, squirrels and other wildlife eat this fruit. And it can be made into jams and preserves. This tree can grow suckering stems and form a thicket. Its branches are covered in short, pointy side branches that are thorn-like. An early spring display of white flowers really wakes up the landscape for the growing year.

#### **Common Name: Chokeberry**

#### Botanical Name: Aronia arbutilofia 'Brilliantissima'

This red chokeberry cultivar is a slow-growing deciduous shrub that is perhaps most noted for its attractive glossy red berries and red fall foliage color. Clusters of white to pinkish flowers appear in spring. Flowers are followed by glossy red fruits which appear in dense clusters along the branches. Fruits ripen in late summer and persist throughout fall and well into winter. The berries are attractive to wildlife.

#### Common Name: Buttonbush

#### Botanical Name: Cephalanthus occidentalis

This large shrub is native to Oklahoma and much of the United States. It can quickly grow to 12 feet high. The white globe shaped flowers appear in summer and are attractive to many pollinators. The seed heads are also globe-shaped and stay on the plant through-out the winter. Birds may eat these seeds. Buttonbush prefers to grow in shad to part-shade and moist soils.

## GUIDED TOUR 🗱 MYRIAD BOTANICAL GARDENS

## **Common Name: Eastern Red Columbine** Botanical Name: *Aquilegia canadensis*

Columbine is an Oklahoma native woodland perennial that adds grace and charm to any shade garden. The gray-green leaves have a soft texture. In late spring, showy bell-like flowers appear with unique spurred tubes that point up. This plant is attractive to hummingbirds and long-tongued insects. In the garden it will spread quickly by self-seeding.

Notes:

Myriad Guided Tours are at 10AM, last Saturday of the month. Please check our web calendar or social media for additional tour dates and times.
